

Features

- Universal input 195~264V AC
- Short Circuit Output Protected
- Approved to UKCA, CE
- LVD & EMC Class B Certified, RoHS & REACH compliant
- 12-48V Lead Acid 3 Stage Control (Fast/Normal/Float)
- OVP, OCP, OTP & Short Circuit
- LED Charge Indicators Included

Ideal Power's 31ACNN12_24_36_48 Range of 12-48V Lead Acid Battery Chargers Series are certified to UKCA, CE, RoHS, REACH & EN 62368-1 Standards and comply with the relevant Efficiency Regulations. These are primarily used in ITE, Audio & Video Industries and customised solutions are available upon request.

Models	31AC2512	31AC3512	31AC1424	31AC2024A*	31AC0836	31AC1048			
Input Voltage		195~264V AC / 230V AC +/-15%							
Input Frequency	47Hz ~ 63Hz / 50-60Hz +/- 5%								
Output Max Current	25A	25A 35A 14A 20A 8A							
Output Power	300W	420W	336W	480W	288W	480W			
Output Voltage	14.6~13.7V DC Float charge / absorption charge								
Ripple & Noise	115 ~ 350 mVp-p (model dependant)								
Isolation	Input isolate Chassis : 500M OHM								
Battery Application	Lead Acid Battery								
Fan Control	Fan on fast speed: Bulk/Absorption charge Fan on slow speed: Float charge								
LED - Power	Red								
LED - Charging	Orange								
LED – Fully Charged	Green								
DC Cable	1.0M Mount clips								
Dimensions	240 x 180 x 76 (LxWxH) mm								
Weight	3.0 (Kgs)								

Specifications subject to change without notice.

Applications

- Communication devices
- O Power generators
- © UPS

Power Inverters

- Vacuums Pumps
- Sailing boats
- Fork-lift
- Ambulance

- © Fire trucks
- © Emergency vehicles
- © Electrical car & bicycles
- Mobile command centres

- O Household items
- CommunicationEquipment's
- Automobiles

NOTE: *This version is with a Universal Input

Safety Approvals

Safety standard

CE EMC Directive 2014/30/EU, LVD Directive 2014/35/EU, RoHS Directive RoHS (EU) 2015/863

Three Steps of Charging & Charge Curve

Step 1	Bulk charge – bring batteries to 75% capacity fast. During this stage charging occurs at full power, which means maximum current, until the battery voltage reached the set limit.
Step 2:	Absorption Charge, boost – slow the current flow, adjusting for maximum efficiency and gently topping off batteries. During absorption charging the current decreases as the battery approached full charge.
Step 3	Trickle Charge – for longer period, maintains fully charged batteries without harmful effects of overcharging and cooking. Trickle charge is intended to keep the battery in a fully charged state and compensates for self-discharge. When the current reaches setting point the battery switches to a maintenance charge at a constant voltage. Should the battery be in use and the charge current Subsequently exceed setting point the charger will automatically return to the beginning of the three-step charge characteristic.
