Features

- Open-loop, fluxgate-based current transducer

- 80A Single phase (40A Three phase)

- Meet IEC 62752: 2018 (IC-CPD)

- Meet IEC 62955: 2018 (RDC-PD)

- Meet the requirements of AC 30mA and DC 6mA residual current detection

- PCB installation, easy to use

- 3,000 A surge current capability

Ideal Power's 36TLB6-A1PDM(K) EV Charger Residual Current Transducer Series are certified to RoHS & IEC 61010/IEC 62752 /IEC 62955 Standards and comply with the relevant Efficiency Regulations. These are primarily used in EV Automotive Industries and customised solutions are available upon request.

Models

Model Number	Input Voltage (V DC)	Rated DC Residual Current (mA)	Rated AC Residual Current (mA)	Rated current (A)	Static Power Dissipation (W)
TLB6-A1PDM	5	6	30	40/ 80(3 phase/ 1 phase)	0.25
TLB6-A1PDMK	5	6	30	40/ 80(3 phase/ 1 phase)	0.25

Note: TLB6-A1PDMK enhances magnetic shielding performance. If there are electromagnetic control devices, such as relays within 10cm of the residual current transducer, it is recommended to use 36TLB6-A1PDMK.

Electrical Characteristics

Item	Symbol	Min	Typ	Max	Unit.
Rated Residual DC Operating Current	$I_{\Delta NDC}$	--	6	--	mA
Rated Residual AC Operating Current	$I_{\Delta NAC}$	--	30	--	mA
Range of Remaining DC Operating Current	$I_{\Delta NDC-RANGE}$	3	--	6	mA
Range of Remaining AC Operating Current	$I_{\Delta NAC-RANGE}$	15	--	30	mA
Maximum Residual Current Measurement Range	$I_{\Delta RANGE}$	--	300	--	mA
Input Voltage	VCC	4.8	5	5.2	V
Static Operating Current	--	--	30	50	mA

AC-DC

Protection and Detection Characteristics

Item	Symbol	Min	Typ	Max	Unit.
Calibration Test Input Low-Level Voltage	$V_{TEST-IN\ IL}$	0	--	1	V
Calibration Test Input High-Level Voltage	$V_{TEST-IN\ IH}$	4	--	5.15	V
Error Output Low-Level Voltage	$V_{ERROR-OUT\ OL}$	0	--	0.6	V
Error Output High-Level Voltage	$V_{ERROR-OUT\ OH}$	--	--	High	--
Operating Output Low-Level Voltage	$V_{X6-OUT/\ X30-}$	0	--	0.6	V
Operating Output High-Level Voltage	$V_{X6-OUT/\ X30-}$	--	--	High	--
PWM Output Duty Ratio	$S_{PWM-OUT}$	3	3.3	3.6	%/mA
Frequency of PWM Output Duty Ratio	$f_{PWM-OUT}$	7.8	8	8.2	kHz
Calibration Test Input Low Pulse Limit	$T_{TEST-IN\ IL}$	--	40	--	ms
Calibration Test Input High Pulse Limit	$T_{TEST-IN\ IL}$	--	1.20	--	s

Isolation Characteristics

Item	Operating Conditions	Min	Typ	Max	Unit.
Isolation Voltage	Primary edge input, secondary output; 50Hz, 1min; leakage current<0.1mA	--	--	4	kVAC
Pulse Withstand Voltage	1.2/50µs	--	5.5	--	kV
Insulation Resistance	500VDC	1	--	--	GΩ

General Characteristics

Item		Symbol	Min	Typ	Max	Unit.
Operating Temperature		Ta	-40	--	+85	℃
Storage Temperature		Ts	-50	--	+125	℃
Weight	36TLB6-A1PDM	m	--	20	--	g
	36TLB6-A1PDMK	m	--	24	--	g
Vibration	0-150Hz, 5g (GB2423.10, IEC60068-2-6)					
Overvoltage Category	OVC III (IEC61010)					

Performance Characteristic

Item	Symbol	Residual Current Waveform	Min	Typ	Max	Unit.
Residual operating current	I∆NAC50	Frequency 50Hz AC	15	22.5	30	mA RMS

AC-DC

Characteristic Curve

36TLB6-A1PDM(K) module performance

Residual Current / mA

- IEC62752 standard DC action time
- IEC62752 standard AC action time
- TLB6-A1PDM(K) DC action time
- TLB6-A1PDM(K) AC action time
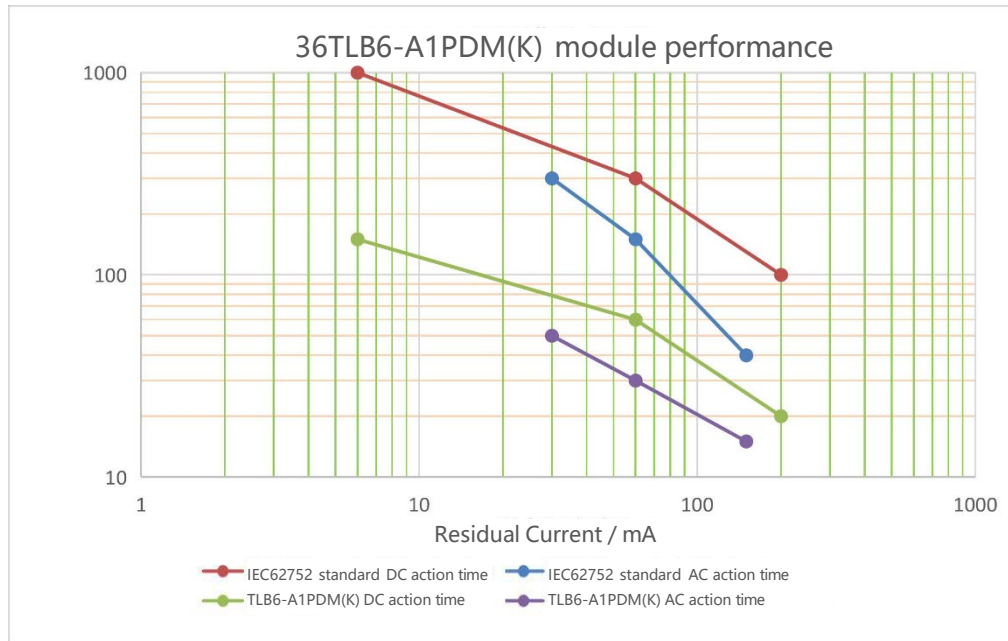

| Pin	Mark	Description
1	ERROR-OUT	Error output pin: when the pin is in the high impedance, it indicates that the system is faulty. At this time, the X6-OUT pin and the X30-OUT pin are also in the high impedance. If the system is normal, the pin is low level.
2	TEST-IN	Calibration Test pin: when the pin inputs a low voltage of >40ms and <1.2s in duration, the product performs a zero calibration.
3	X6-OUT	DC action pin. Under the condition that the system is fault-free, the pin is low level when the DC residual current is less than 6mA; otherwise, the pin is high impedance. In addition, when the X30-OUT pin is in a high impedance, the pin is also set to a high impedance. See "Output pin truth Table".
4	X30-OUT	AC action pin. Under the condition that the system is fault-free, the pin is low level when the AC residual current is less than 30mA; otherwise, the pin is high impedance.
5	GND	Product-powered ground.
6	VCC	The product is powered by VCC, which requires a capacitor of 100nF and 1uF in parallel at the input end.
7	PWM-OUT	Duty ratio output pin. Output a square wave signal with 8kHz frequency, and the duty ratio varies with the input current by 3.3% per mA.
8	NC	Not connected.

Output Pin Truth Table

Pin	X6-OUT	X30-OUT	ERROR-OUT	Operating State
Pin Output State	Low level	Low level	Low level	System normal
	High impedance	Low level	Low level	I∆NDC > 6mA
	High impedance	High impedance	Low level	I∆NAC > 30mA
	High impedance	High impedance	High impedance	Error, system fault

AC-DC

Connection and Description
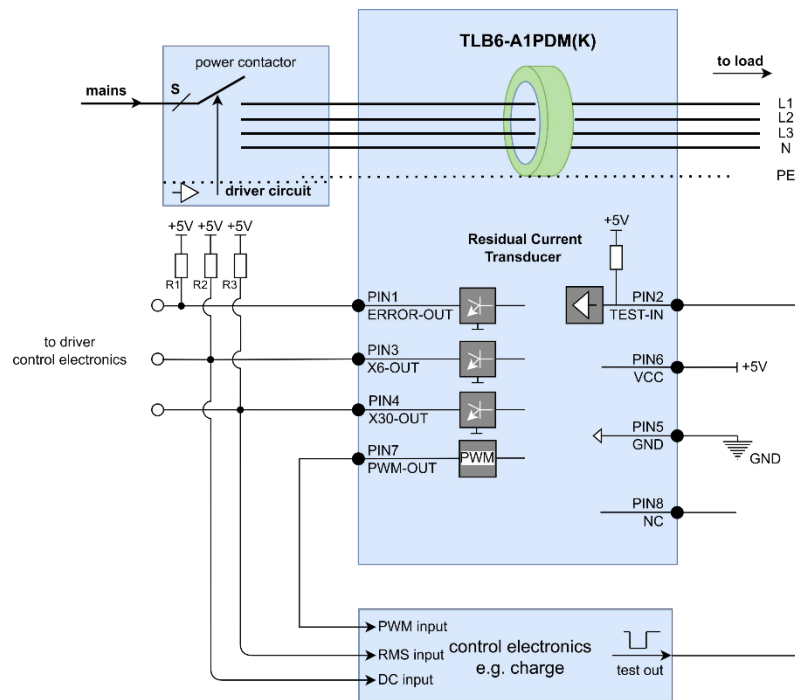

1. The VCC is connected to a 5V power supply.
2. DC action pin X6-OUT, AC action pin X30-OUT and duty ratio output pin PWM-OUT are usually connected to a microcontroller or to a power circuit to control back-end circuit breaker action.
3. The ERROR output pin ERROR-OUT, DC action pin X6-OUT, and AC action pin X30-OUT need to be connected to pull-up resistors R1, R2, and R3 respectively. 10 kΩ is recommended for pull-up resistors.
4. Calibration Test pin TEST-IN is generally controlled by a microcontroller. See "Pin Description" for details.
5. Hot plug is unavailable.
6. The product should pay attention to level matching and use 5V MCU. If 3.3V MCU is used, the pull-up resistors R1, R2, and R3 need to be connected to a 3.3V power supply.
Timing Characteristics

Item	Symbol	Min	Typ	Max	Unit.
TEST-IN Signal Low-Level Maintenance Time	T2	--	300	--	ms
ERROR-OUT Signal Output Delay Time (IDN3=500mA)	T_ERR	--	300	--	

IDEAL POWER

AC-DC

Timing Application Design
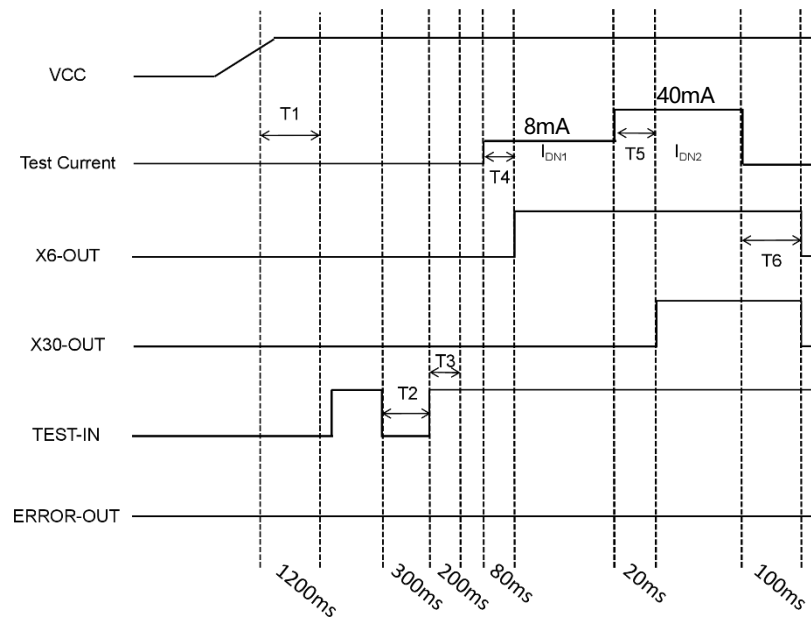

Timing application design essentials:

1. After the power supply is fully started, the startup and stabilisation time of the module is about 40-1200ms (T1). During this period, it is recommended that the whole system do not operate.

2. When performing signal calibration, the external signal sets the TEST-IN pin to a low level, and the recognition time (T2) of the TEST-IN pin low level is about 300ms. After successful identification, a signal calibration test is carried out internally. The duration of the calibration test was approximately 200ms (T3).

3. External input test current I_{DN1}, delay about 80ms (T4), X6-OUT pin output high impedance (trip signal);Then the test current is increased to I_{DN2}, and after a delay of about 20ms (T5), the X6-OUT pin and X30-OUT pin output high impedance (trip signal).

4. The test current input stops, and after a delay of about 200ms (T6), the X6-OUT pin and X30-OUT pin stop the output trip signal and output low level.

5. When the external input test current I_{DN3} (I_{DN3} is greater than the product measurement range), the X6-OUT pin and X30-OUT pin first output the high impedance (trip signal), and after a delay of about 300ms, the ERROR-OUT pin outputs the high impedance.

Notes:

1. For additional information on Product Packaging, please refer to www.idealpower.co.uk. Packaging bag number: 58240085.

2. All index testing methods in this datasheet are based on company corporate standards.

3. Unless otherwise specified, parameters in this datasheet were measured under the conditions of Ta=25℃, humidity<75%RH with nominal input voltage.

4. We can provide product customisation service. Please contact our technicians directly for specific information.

5. This product is used in electronic equipment. Please follow the operation and instructions of the manual and use it in a standard and safe environment.

6. Please do not install the product in a dangerous area; beware of the risk of electric shock during operating, some modules may generate dangerous voltages (such as primary wires, power supply wires);

7. This product is a build-in device. After installation, the conductive part must not be touched completely. A protective box or shield can be used.

8. It is strictly forbidden to disassemble and assemble the products privately to prevent equipment without failure or malfunction.

9. Our products shall be classified according to ISO14001 and related environmental laws and regulations and shall be handled by qualified units.
